## >> PROGRESSIVE TECHNOLOGY INTEGRATION TRAINING

**we've all heard the statistics.**

A study put out by the National Center for Educational Statistics reported that:

- >> Only one out of every three teachers feel prepared or well prepared to use computers technology for classroom instruction.
- >> Professional development research suggests that teachers' opportunities to learn about education technology during traditional professional development activities is often lacking.
- >> Research has indicated that the majority of professional development activities can be described as the following:
  - > short term
  - > devoid of continuity due to inadequate follow up and lack of ongoing feedback from experts
  - > isolated from the participants' classroom and school contexts
  - > characterized by too few opportunities to learn by doing and reflecting with colleagues

**don't let your technology sit unused.**

It's hard to blame schools for the questionable quality of most technology professional development. Most of the training options available reinforce the problem: teachers learn applications for one day, devoid of any curricular context.

ST Concepts is offering a progressive technology integration training program which can affordably meet school districts' need for effective professional development.

Our certified staff is comprised of former teachers and administrators, who know more than "just applications."

Whether the goal is to develop technology rich digital curricula, creating effective classroom web sites, or other enriching technology projects, ST Concepts can provide the necessary instruction, guidance, and support to support teachers in reaching their students more effectively.

**possible options.**

- >> **Powerful Presentations:** At the end of this week long training, each participant will have an authentic, digitally rich, engaging multimedia unit that will capture the imagination of their students. Specific topics include: computer adaptive instruction, visual literacy, finding resources on the web, and much more.
- >> **Classroom websites:** When done well, the web can be a great communication link between home and school. Learn how to create functional, yet dynamic site using some of the web's latest technologies.
- >> **Custom training:** You tell us what you need, and we tailor a solution to your exact specifications.
